Caliper Terminology

Caliper

Adjuster nut is retained in the chain cover to prevent it from falling out.

The rubber adjuster cover is connected to a lanyard to prevent misplacement during maintenance work.

Adjuster nut is integral to the adjuster shaft, no shear adapter to lose.

Dual return springs help eliminate caliper and level binding, allows for a more even pad wear.

Plugged end cap protects the bolt from debris and corrosion, allowing for easier maintenance.

Carrier

Hardened carrier abutments minimize the risk of pad abutment damage, maintain good pad sliding, and increase the life of the carrier and brake pads.

LifeShield Rotor Treatment

Two sample rotor slices tested side by side in the same corrosion test chamber. Test duration simulated 2 years of field operation in a corrosive environment.

Both of these samples were made from the same iron. Sample "A" is standard cast material, and Sample "B" is standard cast material with the addition of anti-corrosive treatment.
